

NEWS RELEASE

YOKOWO to exhibit for the first time at MSV 2024 - International Engineering Fair in the Czech Republic

~Exhibiting antenna products that contribute to Industry 4.0 and digital factories~

JETRO Booth

Yokowo Co., Ltd. (Headquarters: Chiyoda-ku, Tokyo; President: Takayuki Tokuma) will be exhibiting at the MSV 2024 - International Engineering Fair, held in Brno, Czech Republic, from Tuesday, October 8th to Friday, October 11th.

This year, Yokowo will showcase a variety of antennas, including local 5G-compatible MIMO antennas designed to support Industry 4.0 and digital factories, as well as 4G/5G/MIMO antennas for IoT applications. Yokowo will be one of 18 companies participating in the Japan Pavilion organized by JETRO. The decision to exhibit aims to enhance Yokowo's recognition in the EU and introduce its products to a broader audience.

The Czech Republic, with its lower labor costs compared to Western European countries like Germany, hosts numerous automobile manufacturing plants. Yokowo also maintains a product warehouse in the country, making it a significant hub for manufacturing in Europe. However, recent years have seen rising labor costs and challenges in securing personnel, prompting gradual advancements in labor-saving measures using AGVs (automated guided vehicles) and automation technologies such as robots and IoT.

In April 2011, Yokowo established a new incubation center to foster the development of new business fields and has since expanded its sales across Europe, particularly in Germany. Moving forward, Yokowo plans to continue its European expansion, leveraging its advanced antenna technology developed in the automotive sector.

■ Exhibition Overview

Name: MSV 2024 - International Engineering Fair

Date: October 8th (Tue) - 11th (Fri), 2024

Venue: Brno Exhibition Centre, Hall V, Japan Pavilion

■ Main exhibits

Local 5G compatible MIMO antenna

A MIMO antenna compatible with local 5G frequency bands in major countries worldwide. Its ultra-compact and lightweight design allows for installation regardless of device size.

4G/5G/MIMO Antennas

A waterproof, high-gain 4G/5G/MIMO antenna designed for various IoT applications. Each unit supports 2x2 MIMO.

High-precision GNSS L1/L2 antenna, L1/L5 antenna, full-band (L1/L2/L5/L6 + L-band) antenna

A compact, high-precision GNSS antenna compatible with L1/L2, L1/L5, L1-L6, and L-Bands. Despite its small size, it achieves high-precision positioning equivalent to that of a surveying antenna.
